Abnormal uterine bleeding (AUB), also known as atypical vaginal bleeding, is vaginal bleeding from the uterus that is abnormally frequent, lasts excessively long, is heavier than normal, or is irregular. The term dysfunctional uterine bleeding was used when no underlying cause was present. Vaginal bleeding during pregnancy is excluded. Iron deficiency anemia may occur ...

Adenomyosis is a medical condition characterized by the growth of cells that build up the inside of the uterus (endometrium) atypically located within the cells that put up the uterine wall (), as a result, thickening of the uterus occurs. As well as being misplaced in patients with this condition, endometrial tissue is completely functional. The tissue thickens, sheds and bleeds during every

Abnormal bleeding is the most common symptom of a uterine fibroid. If the tumor is located within the uterine cavity or near the uterine lining, it may cause excessive menstrual bleeding. The uterine fibroid may also cause bleeding between periods. Uterine fibroid symptoms can include: (iv, v) Heavy or prolonged menstrual periods

Abnormal uterine bleeding associated with ovulatory dysfunction (AUB-O) or anovulatory bleeding, is non-cyclic uterine bleeding characterized by irregular, prolonged, and often heavy menstruation.[1] It represents one of the identified causes of abnormal uterine bleeding (AUB), a frequently encountered chief complaint in the primary care setting affecting ...

of irregular bleeding Increased risk e.g. anaemia / persistent erratic menstrual bleeding Conservative treatment of abnormal vaginal bleeding and monitoring Refer to gynaecologist for endometrial biopsy (with or without hysteroscopy). Appointment should ideally be within 6 weeks of referral Benign Negative and Observe bleeding continues

Postmenopausal bleeding is usually due to benign (noncancerous) gynecological conditions such as endometrial polyps. But for about 10% of women, bleeding after menopause is a sign of uterine cancer (endometrial cancer). Uterine cancer is the most common type of reproductive cancer (more common than ovarian or cervical cancers.)

Nov 19, 2019 · The endometrium is the lining of the uterus. It is one of the few organs in the human body that changes in size every month throughout a person's fertile years.
