The Evaluation of a Relational Paradigm in Transactional Analysis

In Transactional Analysis of Schizophrenia: The Naked Self, Zefiro Mellacqua presents a full assessment of the relevance and value of transactional analysis in understanding, conceptualizing and treating schizophrenia in contemporary clinical settings. Opening with a review of Eric Berne's ideas, Mellacqua applies theory to the understanding and psychotherapeutic treatment of people suffering from first-episode schizophrenia and to those already living with more long-lasting psychotic levels of self-disturbance. The chapters address a series of crucial methodological themes, including the need for both intensive...
multidisciplinary work with patients in a variety of settings, such as in hospitals, outpatient clinics, and psychiatric hospital treatment. The book is illustrated with engaging clinical case studies throughout, which illuminate the schizophrenic experience and provide examples of how these tools can be used to help patients. Transactional Analysis of Schizophrenia demonstrates how those who suffer from acute schizophrenia, especially those at their very first episode of psychosis, can make an effective recovery and live a satisfying life through the therapeutic application of transactional analysis. It is essential reading for transactional analysts, psychodynamically oriented psychotherapists, psychologists, psychiatrists, nurses, social workers, academics and all mental health professionals working with people suffering from schizophrenic psychoses.

Comprehensive Handbook of Psychotherapy, Interpersonal/Humanistic/Existential This book represents a synthesis of more than thirty years dedicated to the spreading and teaching of transactional analysis, and will be useful to students, directors and professors of the schools of transactional analysis, and also to therapists of other schools, providing an up-to-date and complete idea of the current state of the analytic transactional methodology. The handbook describes the epistemological and methodological roots for a well-grounded psychotherapy with transactional analysis (TA): differences among method, methodology, therapeutic plan, and strategy and technique are all illustrated. TA is presented as a phenomenological branch of modern relational psychoanalysis. Transference and counter-transference are reconsidered in a Bernean perspective. The four strategic phases of alliance, decontamination, deconfusion, and relearning are presented, together with the well-known techniques of the eight Bernean therapeutic operations, two and three-chairs work, redesign technique, and dream-work.

Working Together This important book distills the essence of developmental Transactional Analysis (TA) frameworks that are most useful to bring alive professional coaching competencies. Karen Pratt offers clear outlines of TA frameworks as well as describing how they are applied in coaching, with snippets of coaching conversations as illustrations of the theory in practice. Pratt highlights key TA frameworks in enough detail to be easily grasped but with a focus on application in coaching and other developmental conversations. A TA approach powerfully guides coaches in their listening and questioning. TA is not used as a coaching ‘technique’ – it offers psychological understanding of human beings and the means they make of who they are in the world. Such awareness is key for both professionals and clients in meaningful partnerships for development. Transactional Analysis Coaching will be key reading for professionals working within a wide context, including coaches, trainers, facilitators, supervisors, teachers, mentors and managers – seeking to understand how TA can impact their development. It will be of great interest to coaches in training and will provide a useful resource for clients in their ongoing development.

A Healing Relationship Co-creative transactional analysis is an approach to a particular branch of psychology which, as the phrase suggests, emphasises the “co-” (mutual, joint) aspect of professional relationships, whether therapeutic, educative and/or consultative – and, by implication, of personal relationships. The “co-” of co-creative acknowledges the transactional, inter-relational, mutual, joint, and co-operative, as well as partnership. Developed by the authors over some fifteen years, the co-creative approach has found a resonance not only amongst psychotherapists, but also educationalists, consultants and coaches. The book itself represents and reflects the co-creative approach in that it is based on a critical dialogue between the authors themselves about their collaborative and independent work, as well as between invited contributors and the authors.

The Complete Handbook of Coaching After fifty years of development and refinement in Transactional Analysis (TA), the theory of methods and the actual methods have changed considerably from those originally published by Eric Berne. Many concepts and methods have emerged and been subject to clinical experimentation, some have been refined and expanded and some are no longer used. This book includes contributions from several authors, each of whom presents his or her unique focus on how TA is used in their psychotherapy practice. This book will address the therapeutic effectiveness of various methods in TA and will cover a variety of topics such as unconscious experience, transference-countertransference, the therapist’s transparency, transgenerational scripts, trauma and regression, psychological games, the self-destructive client, an integrative approach to the psychotherapy of obsessional behavior, genetics, psychopolitics, and psychotherapy from a social-cognitive perspective. It is written for both psychotherapists and counsellors who want to learn and refine their knowledge of contemporary TA methods that are most effective with today’s clients.

Rethinking Everything

Volume of Selected Articles from the Transactional Analysis Journal 1971-1980 Transactional analysis is growing in popularity as an approach to psychotherapy, and this book provides an in-depth, comprehensive model of theory and practice. Transactional Analysis: A Relational Perspective presents a relational model of psychotherapy which reflects the theoretical and methodological changes that have been evolving over recent years. In this book, Helena Hargaden and Charlotte Sills tell the story of their model through case history, theory and diagram illustrating how the unconscious process comes to life in the consulting room. Their relational theory and applied methodology of transactional analysis makes it possible to chart realms of uncertainty and the unknown, (de)confusion of the (child ego state), with theoretical assistance. Transactional Analysis: A Relational Perspective covers: * the approach * the dynamics of the relationship * therapeutic transactions * wider implications. It looks at the whole therapeutic relationship, from the establishment of the working alliance, to the terminating of therapy and beyond. It will be of great interest to postgraduates and professionals in the field of psychotherapy.

Transactional Analysis Counselling in Action Organizational Transactional Analysis is a discipline whose focus is on enabling effective communication at all levels of the organization. It looks at development and change from the individual, team, and organizational perspectives. As a result of their extensive experience, the authors have developed an insightful and practical model for working with individuals, teams, and organizations. This book, Organizational Transactional Analysis (O-TA) as a whole, presents new concepts and ideas that will be valuable to professionals in a variety of fields. The book begins with an overview of the field of transactional analysis, introducing key concepts and principles. It then goes on to explore the application of transactional analysis in organizations, focusing on the role of the organization as a system that interacts with individuals. The book is written in a clear and accessible style, making it easy for readers to understand the concepts and ideas presented. Overall, Organizational Transactional Analysis is a valuable resource for professionals in a wide range of fields who are interested in improving communication and collaboration in their organizations.
education and coaching as well as counselling. Case studies from a variety of contexts bring TA to life for trainees in any of these disciplines, and the accessible, engaging writing style makes difficult concepts understandable for undergraduates and postgraduates alike. Bringing their book into the twenty-first century, expert authors Phil Lapworth and Charlotte Sills provide a brief history of TA followed by individual chapters on the concepts and techniques used. Each chapter is devoted to one concept and includes a detailed definition and description, and suggestions for application in practice. Exercises for student, practitioner and client, boxed summaries, diagrams, checklists and sources of further reading make this the ideal text for use in training. This book is an essential companion for those embarking on specialist TA courses or studying TA as part of wider training, while those who want simply to integrate TA into their work with people can dip into it as suits their needs.

At the Interface of Transactional Analysis, Psychoanalysis, and Body Psychotherapy In this fascinating and robust volume, the editors have compiled a collection of articles that provides an account of their individual theoretical journeys as they trace the evolution of relational transactional analysis. They re-examine the term 'relational', offering the reader a multiplicity of ways in which to conceptualise the theory of transactional analysis from a truly pluralistic perspective. This collection of 14 stunning articles from the Transactional Analytic Journal, written over a period of nearly three decades, traces the evolutionary process of a way of thinking that incorporates both theoretical innovations and advanced methodological ideas. Central to the themes of this book is a theoretical understanding of the bidirectional nature of the relational unconscious, alongside a methodology that not always, but most often, demands a two-person methodology in which the therapist’s subjectivity comes under scrutiny. Uniquely useful as a research tool for psychotherapists interested in the most up to date psychological theories, this book offers a perspective on relational theory that is both respectful and critical. It will be of enormous utility to the trainee, the researcher, the clinician and the supervisor and will inform the development of a clinical dialectical mind.

The Transactional Analyst in Action Transactional Analysis for Depression is the first research-based, transactional analysis psychotherapy manual. Developed from the author's research into TA therapy for depression, the book also draws upon a wide range of contemporary research findings relating to depression and its treatment. Mark Widdowson provides the reader with a solid understanding about the nature of depression and clear guidance about how to provide effective psychotherapy for depressed clients. The book is a step-by-step guide to therapy, from the point of first contact through to ending, and covers: The theory and practice of TA Therapy Understanding factors which maintain depression Conceptualising depression using Transactional Analysis Original material on the mechanisms of therapeutic change Optimising the psychotherapy process Key therapeutic processes in the therapy of depression Tailoring the therapy to client needs An introduction to neuroscience and the medical treatment of depression Complete with an additional resources section, including downloadable material designed to be given to clients to enhance the therapeutic process and strengthen the working alliance, Transactional Analysis for Depression provides structured, practical guidance to TA therapy for therapists in practice and training.

An Introduction to Transactional Analysis Now available in paperback. In this volume, theoretical frames, modalities, and applications are examined for Interpersonal/Humanistic/Existential psychotherapy. Topics range from "Culturally Sensitive Psychotherapy with Children" to "Spiritually Sensitive Therapy" and "Existential Treatment with HIV/AIDS clients."

Co-Creative Transactional Analysis Of all the approaches to therapy, Transactional Analysis (or TA) is arguably one of those most suited to time-limited work. At a time when short-term therapy is increasingly dominant as a form of practice, Transactional Analysis Approaches to Brief Therapy provides an insightful guide which both informs and challenges. Rather than a single theory, TA has developed as a group of four schools which share a common philosophy, but place different emphasis on what occurs during the therapeutic process. Written by therapists at the leading edge of developments in TA, the book presents and differentiates each of these four approaches. Through transcripts and commentaries, it shows how therapy applies to practice, for example:

Transactional Analysis for Depression Intensive Transactional Psychotherapy: An Integrated Model (ITAP) introduces a new approach of psychotherapy. Based on psychodynamic foundations, the ITAP integrates the most recent trends in short-term dynamic psychotherapy and Transactional Analysis. This book develops an innovative, clear and complete clinical model of ITAP, and introduces the reader, step-by-step, to the theoretical basis underlying the technique of this intervention. The authors introduce the therapeutic procedure by bringing together the therapy with brief clinical examples, thereby demonstrating the attitude of the intense therapist as well as which theoretical pathways to take to progress with the patient. In addition to the modulation of the technique based on the level of the patient’s suffering, there is also a systematic examination of which cases should be treated with ITAP, and in what way. Intensive Transactional Analysis Psychotherapy is a therapy which can be easily used by all therapists, and this book will be of great interest to Transactional Analysis therapists and other therapists interested in Transactional Analysis and short-term dynamic psychotherapy.

This comprehensive and accessible book charts the origins and development of the major non-psychoanalytic fields in counselling and psychotherapy. Leading British and North American psychotherapists examine a range of approaches including person-centred, transactional analysis, Gestalt, cognitive and behavioural therapy. They discuss how, why and where each approach came about, and the context and influences under which it was formulated. They go on to survey the further development of theory and practice in each case, taking in the most significant trends and highlighting advances which are often not recognized or fully understood. Each approach is then brought firmly up to date with an overview of its current ideology and direction, so that readers can relate its present-day context to its historical background.

Developments in Psychotherapy Selling over 25,000 copies across three editions, this book provides an unrivalled introduction to the core concepts and basic techniques of Transactional Analysis (TA). Ian Stewart guides the reader step-by-step through the successive stages in using TA to create therapeutic change, building understanding of the way the approach works in real-life practice. Key features of this new edition include: - a single extended case study running through the book, - 'Key ideas' panels to summarize the main ideas in each section, - Detailed discussion of 'closing the escape hatches', TA's distinctive approach to resolving the issues of suicide, self-harm or violence - Practice Checklists offering suggested questions readers can use to appraise their own work with clients at strategic points in the text - Space for Reflection sections and Further Reading lists to conclude each chapter. This bestselling textbook offers trainees and practising psychotherapists and counsellors a concise, hands-on exploration of current concepts and techniques in Transactional Analysis. Ian Stewart is Co-Director of The Berne Institute, Nottingham. He is the author of 'Eric Berne (SAGE, 1992) and Developing Transactional Analysis Counselling (SAGE, 1996), and co-author of TA Today (2nd edn, Lifespace, 2012).

Intensive Transactional Analysis Psychotherapy

Six Group Therapies ‘An important book that deserves reading by both trainees and experienced therapists of all approaches and models’ - Counsellingbooks.com Skills in Transactional Analysis Counselling & Psychotherapy is a practical introduction to a uniquely comprehensive therapeutic approach, which combines theories of the mind, emotions, behaviour and bodily experience. Following the typical pattern of working with a client, the book describes the key features of Transactional Analysis (TA) and its basic building blocks - ego states, transactions, games and scripts. Each concept or technique is introduced at the stage in the counselling process at which it is required. Backed up by exercises, this enables readers to build their knowledge and skills base in tandem with their understanding of the counselling process itself. Part One focuses on the development of the therapeutic alliance between therapist and client and gives guidance on how to create structures in which the work can begin. Part Two explains how to build the client’s awareness with the aim of strengthening their capacity to think more clearly and solve problems. Part Three looks at deepening the work with the client to help them to discover the history behind the problems and make contact with their inner child. Part Four explores how to enable the client to move toward personal autonomy through integrating and synthesizing the work undertaken with the counsellor. This book vividly demonstrates the art of TA practice, considering fully the experience of both the counsellor and the client. For all those training in TA, this will be essential reading.
Transactions Combining widely-accepted concepts of human behavior with elements from Rational Emotive Therapy, Positive Psychology, Emotional Intelligence, and most prominently Transactional Analysis, Rethinking Everything explores in immediately understandable terms why we act as we do, how we frequently undermine our relationships, why we often cripple our potential, and how we can take greater control of our lives.

Into TA Relationships may be understood as the contact that emerges from observable social roles underpinned by inter-personal attitudes. Using transactional analysis and other approaches, this book presents a series of models based on an analysis of the relationships that are created when contact between people links images and roles to confirm existential life positions. Because the models provide a meta-level framework for understanding and influencing any sequence of interaction, irrespective of setting or TA specialism, they give ample scope for practitioners to exercise widely differing preferences, techniques and strategies for interacting with clients in ways that encompass a transpersonal or a spiritual view of relationships.

Transactional Analysis for Social Workers and Counsellors Transactional Analysis Psychotherapy: An Integrated Approach is the first advanced clinical textbook for many years, written for psychotherapists and counsellors who use the theory and techniques of Transactional Analysis in their practice or who are interested in expanding their repertoire. Clarkson provides a comprehensive guide to goal-setting and clinical planning for every stage of treatment. Not only a practical textbook relevant to modern developments in supervision, but one which makes a new and original contribution to ways of thinking about transference and countertransference, the theory of self and the process of psychosomatic change.

Contextual Transactional Analysis This book describes the work and life of Claude Michel Steiner, a close colleague and friend of Eric Berne, the founder of transactional analysis. Steiner was an early and influential transactional analyst, an exponent of radical psychiatry, and the founder of emotional literacy. Steiner also contributed a number of theories and concepts to the psychological literature. The book comprises edited excerpts from his unpublished autobiography, "Confessions of a Psychomechanic", alongside commentaries and critical essays from colleagues on his major contributions to the fields of psychology, transpersonal analysis, radical therapy, and emotional literacy. Topics covered include script theory and the theory of strokes, recognition hunger, radical therapy, and the concept of power, and emotional literacy and love. In assessing Steiner's various contributions, the book also identifies central themes and considers the autobiographical nature of theory. This unique collection naturally does not cover the range of Steiner's insights but also his importance to the wider field and will be essential reading for practitioners and trainees alike.

Transactional Analysis of Schizophrenia Contextual Transactional Analysis: The Inseparability of Self and World offers a novel and comprehensive reworking of key concepts in transactional analysis, offering insight into the causes of psychological distress and closing the gap between training and clinical practice. By providing a bigger picture - as much sociological as psychological - of what it means to be human, the book makes an essential contribution to current debates about how best to account for and work with the social and cultural dimensions of client experience. James M. Sedgwick captures the ongoing importance of what happens around us and the distinctive kinds of psychological distress that arise from persistent and pervasive environmental disadvantage. Beginning with a view of people as always situated and socialised, the book highlights the many ways that the world always and everywhere conditions or resists the potential for action. Ranging through ideas about the kinds of contextual conditions which might make psychological distress more likely and illuminating the complex relationship between socialisation and autonomy, the book suggests what the implications of these conclusions might be for clinical understanding and practice. Sedgwick's insightful and compassionate work revises the theoretical framework, fills a current gap in the clinical literature and points the way to greater practitioner efficacy. Contextual Transactional Analysis will be an insightful addition to the literature for transactional analysts in practice and in training, for professionals interested in the theory and practice of transactional analysis and anyone seeking to understand the contribution of context to psychological distress.

Relational Transactional Analysis This innovative book presents state-of-the-art thinking on using transactional analysis (TA) to change the structure, relationships and culture in organizations. The book is arranged according to the three levels of organizations described by Eric Berne - the structural, interpersonal and psychodynamic levels - and the chapters expand on his concepts at each level. With contributions by an international range of authors, incorporating a selection of practical case studies, the book illuminates key themes including group and team dynamics, psychological safety, emotion and, most foundationally, boundaries. Exploring the tensions of boundaries that can determine both the stability of a system as well as its innovative potential, this book provides a strong structural framework for TA coaches, consultants and analysts, as well as other professionals working with and within organizations.

Groups in Transactional Analysis, Object Relations, and Family Systems This is an excellent book. Whilst specifically aimed at the "newer counsellor", this book contains much that will be of interest to experienced practitioners both within and outside of TA this book is an excellent guide to implementing TA techniques and treatment planning particularly from a process model perspective. It incorporates many new ideas which will make it refreshing and inspiring for both new and experienced counsellors and psychotherapists. - ITA News This concise workbook provides 30 practical suggestions to help practising counsellors develop and enhance their Transactional Analysis (TA) counselling skills. After a brief introductory section that summarizes the essentials of TA theory and technique, the book covers crucial aspects of best practice in current TA, many of them unavailable in book form until now. Presenting new and wide-ranging material, each of the 30 suggestions - which are supported by useful case examples - encourages both experienced and trainee counsellors to think carefully about their work and how it can be made even more effective. Ian Stewart provides much-needed practical guidance to such key areas as contract-making, time-frames and the Process Model.
creativity and vibrancy of contemporary TA. The editors have skillfully brought together different generations of TA practitioners in an accessible and stimulating volume. I commend the editors and highly recommend the book.' - Dr. Keith Tudor, author of a number of books and co-author of the article “Co-creative transactional analysis” in the Transactional Analysis Journal. Transactional Analysis in Contemporary Psychotherapy At the Interface of Transactional Analysis, Psychoanalysis, and Body Psychotherapy revolves around two intertwined themes: that of the critique and expansion of the theory and practice of transactional analysis and that of the generative richness discovered at the intersection of transactional analysis, psychoanalysis, and somatic psychotherapy. William F. Cornell explores the work of psychotherapists and counsellors through the lenses of clinical theory, practice, supervision, and ethics. The reader is thus invited into a more vivid experience of being engaged and touched by this work’s often deep, and at times difficult, intimacy. The book is grounded in the approaches of contemporary transactional analysis and psychoanalysis, using detailed case discussions to convey the flesh of these professional, and yet all too human, working relationships. Attention is paid to the force and richness of the transferential and countertransferential tensions that pervade and enliven the therapeutic process. Unconscious processes are viewed as fundamentally creative and life-seeking, with the vital functions of fantasy, imagination, and play brought into the foreground. In the era of short-term, cognitive-behavioural, solution-focused, and evidence-based models of counselling and psychotherapy, At the Interface of Transactional Analysis, Psychoanalysis, and Body Psychotherapy seeks to demonstrate the power and creativity of longer-term, dynamically oriented work.
